GitHub: github.com/anusree-ux/

Aspiring DevOps Engineer with hands-on experience building and deploying applications using Docker, Kubernetes, AWS, and CI/CD tools. Familiar with automation using Jenkins, GitHub Actions, Terraform, and monitoring tools like Prometheus, Grafana, and Loki.

EDUCATION

- | | |
|---|------------------|
| • SRM Institute of Science and Technology, Chennai 2023-2026 | 9.77 CGPA |
| • B. Sc Computer Science | |
| • Union Higher Secondary School, Mambra 2022 | 97.42 % |
| • St. Joseph's High School, Meloor 2020 | 99.9 % |

SKILLS

Cloud: AWS (EC2, IAM, S3, VPC, Security Groups), Azure (Basics)

Containerization & Orchestration: Docker, Docker Compose, Kubernetes (Kind)

CI/CD & Version Control: Jenkins, Git, GitHub, GitHub Actions

Infrastructure as Code: Terraform

Operating Systems & Scripting: Linux, Bash, Python

Monitoring & Observability: Prometheus, Grafana, Loki

Configuration Management: Ansible (Basics)

PROJECTS

Product Catalog Application | React, Flask, PostgreSQL, Docker, Docker Compose, Kubernetes, Jenkins, Kind, Nginx

GitHub: <https://github.com/anusree-ux/product-catalog-app>

- Developed a full-stack Product Catalog application using React, Flask, and PostgreSQL.
- Containerized the application using Docker and Docker Compose for consistent deployments.
- Built a Jenkins CI/CD pipeline to automate source checkout, testing, Docker image creation, and Kubernetes deployment.
- Deployed the application on a Kubernetes (Kind) cluster using Deployments, Services, ConfigMaps, Secrets, Persistent Volumes, and Ingress.
- Integrated Prometheus and Grafana to monitor Kubernetes workloads and application metrics.
- Configured Loki for centralized log aggregation and visualization from Kubernetes workloads.

Log Monitoring & Alerting Platform | React, Flask, Docker, AWS EC2, Nginx, GitHub Actions

GitHub: <https://github.com/anusree-ux/product-catalog-app>

- Built and deployed a full-stack log monitoring platform with a React frontend and Flask backend.
- Containerized the application using Docker and Docker Compose for consistent local and cloud deployment.
- Provisioned AWS infrastructure using Terraform, including EC2 instances and networking resources.
- Deployed the app on AWS EC2 and configured Nginx as a reverse proxy for unified traffic routing.
- Implemented a GitHub Actions CI/CD pipeline to automate application build validation and deployment to AWS EC2.
